

Showtec Blinders used in India

📅 17/02/2022 📁 ALL, Showtec

Ground Control uses 12 Showtec Sunstrip MKII units in big touring act for Prateek Kuhad.

Naveen Deshpande, founder of Ground Control, is an award winning lighting designer from India. He and his creative team are working on progressive and futuristic lighting design and audio visual experiences for artists, festivals, corporates and other large scale events across the globe. He speaks with admiration of the Showtec Sunstrip MKII blinders and uses 12 of them in one of India's biggest tour acts.

The Showtec Sunstrip MKII blinders fitted well into the 2021 Prateek Kuhad India tour. Prateek is a famous Indian singer-songwriter creating independent music in Hindi and English. Last year he performed in places such as Bangalore and Pune, where the Showtec fixtures were used on stage. The tour was led by production company WMS Online and the lighting inventory suppliers were Star Dimensions India Pvt Ltd and J Davies Pro Sound and Lighting.

Naveen Deshpande describes the Showtec Sunstrip MKII to be one of his most favourite fixtures. He has had many great opportunities to use them in different genres of events that he has done. It is such a nice fixture because of its versatile application possibilities, allowing Naveen to create creative light flickering patterns and blind the audience with blinder moments via DMX. This is possible thanks to its individual pixel control, dimmer function and ten bright 50 W warm white Osram bulbs.
